

Amcor tracks its carbon footprint with EnviroChart.

Case Study:
Amcor Limited

Region:
Global

Customer Profile

Amcor is a global packaging company operating 203 manufacturing sites in 33 countries, employ 22,000 people and generate almost \$AU11 billion in sales annually.

Business Situation

Amcor needed an application that would allow it to capture, track and report greenhouse gas emissions and abatement projects across the organisation.

Solution

By implementing EnviroChart, Amcor has streamlined the capture, analysis and reporting of emissions and abatement projects. Today, EnviroChart is used by over 300 staff across America, Asia, Australasia and Europe.

Benefits

- Track inputs, emissions, & intensities
- Manage abatement projects
- Roll up reports
- Reduced compliance costs
- Monitor Amcor's environmental performance

EnviroChart

As a major user of energy, Amcor has established and implemented programs to deliver reductions in energy usage and greenhouse gas emissions. This includes the company's involvement in a number of emission trading schemes worldwide.

Today, EnviroChart is used by Amcor and its business groups to manage, capture and report energy, waste and water data, providing Amcor with a snapshot of its carbon footprint and energy efficiency at any given time, location or region.

Dr. Mick Blake, Amcor Limited - Group Sustainability Manager's role is to lead and develop sustainability strategy for Amcor and Amcor's business groups.

“Using EnviroChart to gather, process and disseminate emission data enables us to manage our environmental performance.”

“Having access to this data is imperative to helping Amcor and its business units set targets and deliver against their sustainability objectives. Using EnviroChart to gather, process and disseminate emission data enables us to manage our environmental performance.”

EnviroChart offers a simple yet detailed management tool for reporting utilisation data, carbon intensities and abatement projects in a secure dashboard like manner.

“Reducing your carbon footprint (and identifying cost savings) makes good business sense” said Eshell Baron, General Manager of EnviroChart. “Companies that manage their environmental performance, promote good corporate citizenship and long term sustainability outperform their peers.”

“With Australia's signing of the Kyoto Protocol, ongoing government reporting requirements and the increasing public pressure for companies to reduce and offset carbon emissions, EnviroChart offers a powerful, independent reporting solution suitable for any business wishing to track its impact on the environment.”

EnviroChart was first released in 2004 and has had subsequent updates in accordance with market needs and government reporting obligations. EnviroChart is a division of Formation Technology Group, a high technology service provider located in Melbourne, Australia.
